

Comprehensive set of user stories based on requirements to be refined and prioritized as project evolves.
Authentication & User Management
As a Student, I want to sign up with my campus email so only students can join.
As a User, I want to log in securely using my credentials so I can access my account.
As a User, I want to manage my profile (name, contact info, profile picture).
Seller Features
As a Seller, I want to create a new listing with title, description, category, price, and photos.
As a Seller, I want to edit my existing listing.
As a Seller, I want to delete my listing.
As a Seller, I want to mark an item as “Sold” so others know it’s no longer available.
As a Seller, I want to see all my active and sold listings in one place.
Buyer Features
As a Buyer, I want to search listings by keyword.
As a Buyer, I want to filter listings by category and price range.
As a Buyer, I want to use a chatbot-style search (e.g., “Do you have a CMPE202 textbook?”) and see relevant results.
As a Buyer, I want to view listing details including seller info and photos.
As a Buyer, I want to message the seller directly from the listing page.
Chat & Communication
As a User, I want an in-app chat to negotiate prices and ask questions.
As a User, I want to receive notifications for new messages.
As a User, I want to see a list of my conversations.
Admin & Moderation
As an Admin, I want to view flagged/reported listings.
As an Admin, I want to delete inappropriate listings.
As an Admin, I want to suspend users who repeatedly violate rules.
Reports & Feedback

As a User, I want to report incomplete or inappropriate listings to the admin.
As a Seller, I want to receive feedback from buyers (optional stretch).
As an Admin, I want a dashboard to see key metrics (active listings, active users, reports).
Technical Stories
As a Developer, I want APIs for listings, search, chat, and auth to return JSON with proper validation and error handling.
As a Developer, I want the system deployed on AWS EC2 with auto-scaling and a load balancer.
As a Developer, I want to store photos in S3 and listing data in PostgreSQL .
As a Developer, I want to maintain CI/CD pipelines for automated deployment.
As a Developer, I want logging and monitoring enabled for debugging.
Documentation & Process
As a Team Member, I want to maintain a GitHub project journal with weekly Scrum reports.
As a Team Member, I want to track the backlog, burndown charts, and XP values (e.g., communication, feedback).
As a Team Member, I want a complete README including architecture diagrams, wireframes, and design decisions.
